Will the netsh command work in Windows 2000 Server? I too have lost my ndiswanip registry entry. It happened as a result of restoring the system state during disaster recovery. I can ping devices on my local network, but cannot ping anything on the internet side of the router. Neither an ip address or URL returns a response. Also, I cannot uninstall TCP/IP in Network Connection properties.

Thanks.

Server 2003 Enterprise

Event Type: Error  
Event Source: Tcpip  
Event Category: None  
Event ID: 4191  
Date: 1/9/2008  
Time: 9:22:55 AM  
User: N/A  
Computer: MTNGT500  
Description:  
IP could not open the registry key for adapter

Re: NDISWAN TCPIP Event Error 4191 – Stack Problems

TCPIP\Parameters\Adapters\NDISWANIP. Interfaces on this adapter will not be initialized.

Obviously, a lot of you have seen this error in the past. As always with Win2000, we would uninstall TCP/IP and re-install it to fix the problem (KB284955). Also, obvious is that M\$ has made the IP stack a core component from Windows XP on to current OSes. A few years ago I ran into this problem and we were not able to fix the error in 2003 Server a few years ago. "Netsh int ip reset" command does not work as it only rebuilds the the normal NIC adapters registry and does not do anything with ndiswanip adapter linkage. Are there any fixes out there for this problem yet? I don't understand why this is still an issue without a legit fix, as I have seen this problem a number of times on the net. Thank you in advance for any help you can provide.

I guess you saw this article at this link already?

<http://www.eventid.net/display.asp?eventid=4191&eventno=869&source=Tcpip&phase=1>

Is RRAS installed? If so, take a look at this (referenced from teh above article):

Routing and Remote Access Service does not start and event ID 20103 message is logged

<http://support.microsoft.com/default.aspx?scid=kb:en-us:299013>

How about this?

325356 – HOW TO Remove and Reinstall TCP–IP on a Windows Server 2003 Domain Controller:

<http://support.microsoft.com/default.aspx?scid=kb:en-us:325356>
