Environment:

DMZ-VMS1 = Windows 2003 R2 SP2. It runs 6 Virtual Servers

AD-FS1 = Windows 2003 R2 SP2. File Server head joined to our AD Domain.

These are default installations of Server 2003 R2 I've not locked down anything yet.

Problem:

1 of the 6 Virtual Servers in the DMZ is reporting the error when you try to map a drive back to the File Server.

No Network Provider Accepted The Given Network Path.

Things I've checked:

I can Ping the AD-FS1 from VM6 and the name resolves

I double check the LMHost and Host Files there are no entry in there.

I've run a port query and it reports the same has the servers that are working.

This VM was a copy of one that was working I just renamed and Re-IP'd it.

There are no errors in the event log.

I've both DNS and WINS pointing to our DMZ Servers.

Any new ideas on this would be greatly appreciated

.
