Hi

i am doing inter forest migration using ADMT 3.1 from server 2003 to server 2008 new forest.

i have DHCP setup on my existing PDC server  
Mmy domain is single lable domain thats the main reaon i have to do interforest migration, domain renaming will ruine my exchange envroment so i dont watnts to go that path.

can some one help me provide step by step to move my DHCP settings from 2003 env to 2008 server.

Thanks  
Imran.
