Hello pk,

Please post an unedited ipconfig /all from one client.

Best regards

Meinolf Weber

Hello pk,

Just realized today that i forget the link:

<http://support.microsoft.com/kb/555381>

So no firewal is running on the computers?

Best regards

Meinolf Weber

Thanks for your info, those strange character are chinese word as the W2K is chinese version, so may not show on your PC.

For the fireware device, as all the PC and the server are all

Re: fail to join domain

connected directly to the 3Com switch, i believe there is no need to go through the firewall unless they need to access internet.

Hello pk,

If you use LAN internal the firewalls you have to open the ports according to this one:

Also make sure to use only the domain DNS server on all client machines, no externals like the ISP's DNS server.

Your netdiag output contains strange characters, do you now any reason?

Best regards

Meinolf Weber

Hi all,

I got a local LAN domain not connection to internet, just a 3com switch cascade (by link from the front port) and a W2K server, and ~30 PC; a firewall device internal LAN leg also connect to the switch where internet

Re: fail to join domain

access will be authorize by
passsword on demand on
users' PC
screen.

This
works well for years.
Recently we find that the
network seems slow down a
bit, as file
copy
from/to server is slow, and
PC disconnected from
domain can join
domain
again.

I will post more information
/ test result below for
reference.
