Sorry for the incomplete reply:

Just to confirm, we are talking about the Share Permissions and the NTFS permissions giving Everyone full control, correct?

If that is the case, you might be running onto an SMB signing issue with the Me clients. You can install the active directory client to properly handle the signing and encryption, again, Me and its limitation will come into play here as you will have to use the 9x client:

276472 Directory Services Client Is Not Included with Windows Me

<http://support.microsoft.com/?id=276472>

323466 Availability of the Directory Services Client Update for Windows 95 and

<http://support.microsoft.com/?id=323466>

814112 Files on Network Shares Open Slowly or Read-Only or You Receive an Error

<http://support.microsoft.com/?id=814112>

810907 Error Messages When You Open or Copy Network Files on Windows XP SP1

<http://support.microsoft.com/?id=810907>

XP clients not in the domain, may also have the SMB signing disabled on the local policy, does this problem happen for any domain computer?

Regards,
Damian
