Back in my Unix days on DEC Alphaservers, I had routers logging to a syslog daemon (equiv to a background service). Don't know if Windows 2003 comes with a syslog daemon utility or not, but I did a quick Google search and found several references pointing to this 3rd party freewara for Kiwi:
<http://www.kiwisyslog.com/products.htm#syslog>

and, if you take a look at their testimonial page, it appears this may do the job for you:

<http://www.kiwisyslog.com/testimonials.htm>
