Hello! A quick question – I have a friend who is looking after the IT network for a small business. There is already a Cisco PIX 501 firewall in place there.

By default SBS wants 2 NIC cards and wants to act as a firewall – is there a clean way to tell the installation process that, no, you don't wish it to perform any firewall functions, only 1 NIC card will be connected to the internal LAN, and it is only to act as an internal server?

Thanks for your help... Tariq.
