I'm completed green with SBS. Let alone 2003.

I installed a fresh copy of SBS 2003 on a brand new hard-drive to this cpu last Wednesday the 18th of 2/04. Zero problems. I spent my time on getting it up and running regarding the OS itself, networking (6 wkstation dentists office) and supporting their key vendor product. Hadn't even registered it until 20 minutes ago.

Got a call this morning from the staff that it had "shut down" twice this morning without warning. Upon arrival, and reviewing the event log it appears the problem has to do with some kind of registration issue or something (which is what prompted me to activate/register) the product.

I'd be happy to upload the event viewer to any site if it would help. Or even grant you remote assistance rights if requested.

The event again is.....

"This computer must be configured as a domain controller. To prevent this computer from shutting down in the future, run Setup on the disk that you used to install the operating system to configure the computer as a domain controller."

They are not, never had and don't need to, run a domain.....in my opinion.

The first instance of this message was on 2/18/04.

Per the event viewer at 8:40:47 last night.....

microsoft.public.windows.server.sbs: Shutting down with event id #1013, source is SbCore

"This computer must be configured as a domain controller. It will be shut down in 60 minutes. To prevent this computer from shutting down, run Setup on the disk that you used to install the operating system to configure the computer as a domain controller."

Then almost exactly 30 minutes later...

"This computer must be configured as a domain controller. It will be shut down in 30 minutes. To prevent this computer from shutting down, run Setup on the disk that you used to install the operating system to configure the computer as a domain controller."

Then another 30 minutes....and

"The server was shut down because it did not comply with the EULA. For more information, contact Microsoft."

Obviously theres something basic regarding EULA I don't understand.

My customers waiting on me.
