Hi. I'm running Symantec Corporate Edition with AV Client Security scanner on my workstations and servers, Symantec System Console with Quarantine on a dedicated server, and Mail Security 4.0 for Exchange on the mail server. The only place I've ever had to install a license file is in Mail Security 4.0. From what I understand you do not have to install any license file to the clients or the server for the file scanner, only Mail Security 4.0 needs a license ?
