OK IM AM SO PISSED RIGHT NOW, I HAVE A SBS2003, AND NOW AFTER HAVING IT FOR 2 WEEKS, SPENDING A LOT OF HOURS CONFIGURING IT, IT TAKES A COMPLETE DIVE TO HELL!

Now when I start the machine, it goes through the entire process of loading windows, but when I get to the Blue screen, at which time the "starting windows" dialog box appears, I get a box, with a red "X" which says lsass.exe This is a new one for me, and when I hit OK the computer restarts, and the entire process starts all over again.

I have tried booting in all forms, SAFE MODE, with and w/out networking, etc etc etc, but nothing works!!!!

Apparently I have to boot everything from scratch, as though I had the time or a backup to do to, any help would be greatly appreciated....

THANKS!
