Is your server setup to use a PPPoe connection?

It looks like at one time you ran the CEICW and configured it to use a PPPoe connection.

If you no longer use this connection, you can remove the dial up interface from RRAS. This will prevent the 20111 error message.

Go to Routing and Remote Access in Admin Tools.

Under your server, go to IP Routing then General.

To the right, you should see the interface labelled "Small Business Broadband Connection"

This is the Interface that is causing the error. You should be able to right click on it and delete it.

Best Regards,
