Hi,

Open the Internet Service Manager console and check the properties of the default web site, go to the Home Directory tab and make sure the following permissions are selected:

Read, Log Access, Index this Directory, Frontpage Web, and on the bottom, Permissions set to Script. Ok any changes and re-start the WWW Publishing service if you did make changes.

The problem may be related to changes to this default web site or this web not currently running, it might also be related to Proxy problems.

For more information:

222531 Troubleshooting SBS Console Problems

<http://support.microsoft.com/?id=222531>

<http://support.microsoft.com/?id=226331>

279132 A Process to Remove and Reinstall Windows NT Option Pack, Proxy Server

<http://support.microsoft.com/?id=279132>

By the way, this is the SBS 2003 NG, the 4.5 NG is microsoft.public.backoffice.smallbiz.

Regards,
Damian
