Robert,

Good to hear from you again. Still having issues with that fax problem. Maybe I could get some input from you on that. There is another guy with issues and we are both looking for help.

**\*\*\*Regarding Server Room Temperature**

Ideal temperature is 8-15C or 45-60 F. Not because you cannot run hotter but because heat shortens the life of every component. If you think about the most preventable way to keep your server up it is to avoid hardware problems.
