Hello again,

OK, I have put things back so that there are two nics.

Reran CEICW

CEICW fails when configuring the firewall.

In the wizard, I chose to create filters for Email, VPN, and Terminal Services

And custom filters for RWW.

After the wiz failed, the services for ISA were not running and still set for manual mode.

Q. Which services should be running / automatic for ISA?

Default access protocol rule is applied to Legalsrv\sbs internet users.

Because he has most everyone in non default OUs, no one has Internet users membership. I looked in ISA server mgt console:

Access Policy | Site & Content Rules:

SBS Internet Access Site & Content Rule | Applies to Legalsrv\sbs internet users

I added "Applies to: Legalsrv\Domain Users"

Did the same with SBS Internet Access Protocol Rule.

Restarted services using the ISA server mgt | Monitoring | Services tab.

Still cannot get internet access from workstation running F/W client.

I get "403" Forbidden – Yhe ISA server denies the specified URL (12202)

I then added my account to Internet Users group, still same 403 error.

Q. What should the Site & content rules look like based on my CEICW choices above?

Packet filters:

Same thing – only the following were created:

DHCP client Allow (not enabled)

DNS Filter allow (the rest enabled)

ICMP outbound

ICMP ping response (in)

ICMP source quench

ICMP time out (in)

ICMP unreachable (in)
SBS PtpCallPredefinedType
SBS PtpReceivePredefinedType

I created a filter "Exchange" Allow using predefined SMTP policy element.
I can receive mail, but it looks like I cannot send it.

I think that if I can get the ISA server manually configured then I will be
OK.
