In answer to all your very kind replys.

I changed the Wins as suggested by Marina, re ran the ICW, same result.

In answer to Chad, yes I found that article too, no further posts I note from Chris Ard. At least someone else has it and is repeatable.

Tony. The router is set to no nat, I have a number of fixed IP's available from our ISP, I only starred (*) out my address as I did not want it know whilst I was running with and without a firewall. I did open a case with PSS, we went through a number of changes, like removing ISA, then trying to run the ICW. It still failed. I then re installed ISA, complete with all service packs and patches (SP2 for ISA was not out whilst I was doing this) I had to remove ISA again to enable the client to access the Internet, as without connectivity they lose a lot of business. I will be contacting PSS on Monday to continue, I was only hoping that someone else had come across this, as the Engineer from PSS was clutching as many straws as I was.

In response to Wesley. Standard install, no changes made to default website (and yes I have checked it is set to all unassigned) and no other sites created either.

Regards Paul.
