I am not sure if the backup is running correctly I get a message stating that the backup has failed because the requested media failed to mount The operation was aborted but the log says it has backed up Directories 4138 files 90527 bytes 11,812,975,150. Checking the tape data seems to be on the tape.

I am running SBS2003 Standard Edition using a 20gig DAT Drive
