hi

i have 20 users who can access a mapped drive (n drive) on the SBS2003 server. (this folder is on the d drive which is 80GB)

the problem i have is that some users (5 out of the 20) when they access the files on the drive, is read only and can not save the file back to the drive.

while the other 15 users can access the files ok.

These files where copied to a DVD from the old server and copied acrossed.

How can i easily change the permissions to allow the 5 users to have full access

I find it weird that it only happen to 5 of them.???

thanks for any help

Steve
