I have:

SBS behind a firewall
exchange ports for POP and SMTP are hosted thru the
firewall.

Users in Mexico and the US
DNS being done by our ISP in NY.

I want to be able to access the mail server with pop both
INSIDE and outside the firewall. The outside is no
problem as the DNS is set to use the public address of
the firewall. But once inside the firewall, the address
don't function. I want to have different assignments
inside the firewall so that the same addresses will work
in both places...

thanks in advance.
