Frank:

Thanks for the update and I appreciate you contacting me directly in re the "/console" issue. The BAT file doesn't seem to fire. Let's say:

SERVER01 is my SBS2003
SERVER02 is my Server 2003 Application TS

The SBS_LOGIN_SCRIPT.BAT reads:

```
\\SERVER01\Clients\Setup\SBSCLNT.exe /s SERVER01 mstsc /v:\\SERVER02
```

Under USER:PROFILE:LOGIN_SCRIPT I have SBS_LOGIN_SCRIPT.BAT listed (all other fields on that screen are blank).

I don't need any setup to take place with my users. Can I parse down the BAT file to just redirect to TS?

Thanks!

Anton
