To use Outlook via the Internet

Ensure that the following requirements have been met on the client computer:

Verify that the computer is running Microsoft Windows XP Service Pack 1 or later

a.. Click Start, right-click My Computer, and then click Properties.

The version of the operating system and service pack is displayed under System. If you do not see a service pack version, there is no service pack installed.

Verify that Windows update Q331320 is installed on the computer (not required if you are running Windows XP Service Pack 2 or later)

1.. Click Start, click Control Panel, and then open Add or Remove Programs.

2.. Under Currently installed programs, search for the item Windows XP Hotfix (SP2) Q331320.

3.. If the item is not present, go to the Microsoft Web site (<http://go.microsoft.com/fwlink/?LinkId=18651>) and follow the instructions to download and install it.

Verify that the computer is running Outlook 2003 or later
