Hi

Anyone using Dlink 302 ADSL Modem

I need some help in opening the ports?

I can get internet access on all computers, but can not receive email (can send)

I can also not remote log in?

Just need some help in setting the right configure in modem. The ISP was no help as they say they only support connection to a single computer and not a server.

On hold at the moment to Dlink support for the past 45 mins (2nd time)

Thanks

Steven
