First, enable and turn on the Windows Time Service and the Intersite Messaging Service in the Services.msc snap in. After doing this, you will be able to use your SBS server as the time server in the domain. It should automatically know that it is the time source for the domain, or you can set it to synch to an external time source.

| How do I make the SBS2003 server the Time Server for all
| machines on the network. I remeber seeing this at one
| point in time.
| Any ideas.
| Thanks
| DMJR
