What exactly are you Backing-up ?

If you're backing up the Recovery Storage Group – Don't.
Also, if the Exchange files are on the system partition and you're performing a system state backup along with the Exchange backup simultaneously – Don't.

Backup Operation Fails When You Back Up Exchange Server 2003 Databases and System State Information at the Same Time

<http://support.microsoft.com/default.aspx?scid=kb:en-us:820272>

Backup of the Exchange Server 2003 Information Store and the Windows Server 2003 System State Data Does Not Complete Successfully and Event ID 8019 Is Logged

<http://support.microsoft.com/default.aspx?scid=kb:en-us:820852>

Personally I'd suggest you use the To-Do List Backup Wizard.

The Backup created is a true Disaster Recovery solution.
