Came across this the other day. took ages to winkle it out.  
The NAT in RRAS has a DHCP Server. ( hence the Server IP Address as the  
Second DHCP Server )  
...have a look under Admin Tools RRAS > NAT and disable it.

( Sorry I don't have a server I can walk you through or my notes at the  
moment, but I'm sure you'll find it. – If not, I'll post later. )

Not sure what causes it, but It may be the SBS Box finding an ICS  
(Server) on one of the XP Workstations.
