Looking at Smallbiz again....

"Internet Connection Wizard (ICW)

Start the SBS Admin Console and run the ICW.

When prompted: Select Broadband Connection

When prompted: Select External NIC

When prompted: Use the DNS Nameservers from your ISP as DNS Forwarders. "

I thought that the Broadband connection was if I connect the connection directly to the external Nic....no router involved....I am wrong on this and maybe that is where I blew it? I used the router with Static IP settings.....

Thanks again!
