Hi,

You are always welcomed to call PSS and open a Exchange security related case.

Adding the single entry as referenced by the KB article cannot trigger such behavior, is there a chance that users had Send As rights from before, they were just never aware? Have you successfully sent an email as another user? Open the properties of the mailbox store in the Exchange System Manager, then open the security tab, who has Send As permissions here? Changes at this level will affect all hosted mailboxes at a global level, that is why I am looking for that. It is common for an administrator to tweak some security here to give Admins full access to everyones mailboxes, this is also changed when there is a need to use Exmerge.

Regards,  
Damian
