OK Susan, I'll look forward to your blog. In the meantime I'll give the user admin rights for the install and then change it to power user after the install.

Buy this tool

InCtrl5:

<http://www.pcmag.com/article2/0,4149,9882,00.asp>

For QB2002 I had to wack open classesroot and I can't remember all the places that it needed to be wacked.

I'll be doing this on a couple of workstations tomorrow so I'll blog about it this weekend.
