We are noticing that this is more frequently.

XP SP2 cannot connect to servers. Is anyone else experiancing this?

Click Remote Desktop connection and immediatly a box pops up.

the client could not establish a remote connection to the computer

the most likely causes of this error are:

- 1) remote connections might not be enabled on the remote computer
- 2) the maximum number of connections was exceeded at the remote computer
- 3) a network error has occurred while establishing the connection

This happens to all external servers but to internal sercer ok. Can ping the external servers

Tried turning off firewall no difference. Latest pc this has happened to logged in as administrator still same prob. Done XP repair and reinstall. still no go.

When reinstalling did before SP1 update and SP2 update, still wouldn't connect

Friday we even had reports that a W98 pc is now experiancing this.

In view of different sites and all different steps on an XP reinstall leading me to think it is a server windows update. However other pcs on the same network have no problem.... ;-)

Found this and seems to be happening elsewhere
