Hi Steve,

See if this is/resolves the issue(s):

Check permissions on the following directory.

`%systemroot%\microsoft.net\framework\v1.1.4322`

It's possible the Network Service account doesn't have the needed permissions. Check to see that the Local Service and Network Service accounts have Full Control permission to

`%windir%\Microsoft.NET\Framework\v1.1.4322\Temporary ASP.NET Files.`
