Norton antivirus does suck. That is why I use Symantec Antivirus that is designed for the business. You can't compare Norton antivirus (that is designed for the home user) with Trend that is designed for the business, it isn't apples to apples.

I've been using Symantec's corporate antivirus since the day they released it in 1997 and have never had any major issues with it. Still recommend it today. Just don't care much for how much antivirus cost now days....

Make sure and get Symantec Antivirus 9.0 with Groupware protection for your SBS which comes in 5, 10 and 25 packs. This package includes Symantec Antivirus Corporate Edition for the desktop and servers, plus Symantec Mail Security for Exchange to protect your email. They also have an Enterprise edition that includes Symantec Mail Security for SMTP, that works very well and takes all the load off of Exchange but of course cost more...
