Hi zjam,

Make sure your nic binding order is correct.

Start | Control Panel | Network Connections.

On the Network Connections menu, Advanced | Advanced Settings > Adapters and Bindings tab – ensure your internal nic is at the top of the list, immediately followed by your external nic.

Re–Run the CEICW – don't select any of the 'do not change' radio buttons. Even if you're not making changes to a certain component (the previous entries will be provided).

Re–Run the Configure Remote Access wizard from the TODO list.
