Hi,

Thanks for your posting back!

By default, the registry value called NoTransportOrder does not exist, so you may need to create it manually. (String value)

Alternatively, you can simply go to AD Users and Computer, remove SBS_LOGIN_SCRIPT.bat from the Profile tab to stop the logon script running for the user account. To do so:

- 1) Server Management -> Client Computers
- 2) Right-click the client machine, then View Computer Settings
- 3) Expand Client Setup Configuration, right-click Configure Outlook Profile Information and select Change.

You can also set a default email profile when you start Outlook.

For more information, please refer to the following Knowledge Base article:

Q245446 XCLN: Error Message: No Transport Provider Was Available

<http://support.microsoft.com/support/kb/articles/q245/4/46.asp>

NOTE: Although the above article is written for Outlook 2000, it also applies to Outlook 2003.

If you have any concern on this thread, I am glad to be of further assistance. We look forward to hearing from you.

Best regards,

Jerry Zhao (MSFT)
