Hi Marina, thanks for answering.

I mean, that I want 1 SBS in a network, but with the possibility of different languages. So I want to make intranets in English for foreign customers and e.g. in German or Dutch for local customers. For example in the home page of a teamsite:  
english "announcements"  
german "Ankündigungen"  
dutch "aankondigingen".

I think, one can use the option in "Extend and Create Content Database" when extending a virtual server with "Site language". I have now the trialversion with the only possible choice: "English", but I can imagine that there are "plug-ins" or something else so I can choose for Dutch and German too for a particular virtual server.

Do you understand what I mean ??? If not, don't hesitate to ask more Marina.

Thank you in advance.

greetings, Ger.
