Hi,

Just upgraded to SBS2003 and all is working geat. I have mixture of XP SP2 and 2000 clients. My issue is internal email takes a long period (1-2 mins sometimes) to be delivered. (very annoying when person you are emailing is sitting next to you). I have tried adding an exception and scope to windows firewall but email is still slow. Is this normal or do I need to change anything on the Server.

Thanks
