Hello,

I've seen this issue on the board before, but I have not seen a resolution that worked for me yet. Here is the issue:

- I have SBS 2003 Standard (not using ISA) with 2 NICs setup properly
- When I use VPN to connect from inside my network, the VPN drops/disconnects at exactly 3 minutes every time.
- I have tested my router and it works perfectly. In fact I had this same router setup with a Win2k server and had no VPN issues. Also, when I connect a pc to the router and bypass the server, it works perfectly.
- Now it gets fun: With my current setup, I can VPN to a NT4 network all day long without any trouble. It seems that this issue only happens when I am trying to connect to a Server 2003 or SBS 2003 network from inside my SBS 2003 network.

I do not have a Win2K server available to try to connect to out, but I may build one over the weekend to test this further.

This is driving me crazy! Any suggestions?

Thank you,

- John
