1) This is the only PDA I have for my company. I was trying to synch up using VPN and get errors – unlike when I use my laptop from a remote location.

2) OMA? I am not sure what this acronym means?

3) I am getting Interent_55 error – when I turn the SSL off I get the error HTTP_403.

I am trying to do two things overall – one is a general synch when the PDA is in the cradle – and a remote synch (like a laptop) connect to the interent and then use VPN to et to my server and then synch with outlook.
