Many thanks for taking the time to point me in the general direction. Whilst this didnt fully resolve the issue it certainly resolved another issue that cropped up.

Just so that you are aware...and incase anybody else is interested, the regedit fix suggested by Sean Daniel to resolve the fax wizard issue must be done even if you try to remove and reinstall Fax Services from SBS disk. The fax service will not install until you fix the registry.

All systems are back on line and progressing as planned

Thanks again for the help it is greatly appreciated.
Best regards
