- 

I know that I have posted about this question before, and I also know that I have to wait for SBS 2003 Service Pack 1 to be installed before installing ISA Server 2004. But I would like to know is there any special documentation on how to set it up and can I set it up using the current configuration I have. The configuration is as follows: Internet to Router to Switch then the server has one NIC and it is plugged into the switch and ports opened on the router to allow OWA, RWW, mail and ect. Please post any helpful information that could help me new to ISA 2004. Thanks in advance.

Anthony
