Hi Dave,

Thank you for posting in SBS newsgroup.

>From your description, I understand that you cannot logon to the new machine by using a user account but you can still use the domain administrator user account to logon. If I misunderstand your concern, please let me know.

As I know, this behavior occurs when a domain policy, at the site, domain, or organizational unit, has a configuration that denies the users the Log on Locally user right.

You may check the default domain policy to confirm that the Log on Locally user right is not defined or is defined to include everyone who is able to log on to domain member computers. To check the default domain policy, follow these steps:

1. Start the Active Directory Users and Computers snap-in.
2. Right-click the domain and click Properties.
3. Click Group Policy.
4. Double-click Default Domain Policy.
5. Click Computer Configuration, click Windows Settings, and then click Security Settings.
6. Click Local Policies, click User Rights Assignments, and then click Log on Locally. NOTE: Only the users that are in the list for this user right should have the right to log on locally to domain member computers.
7. Add Domain Users or Everyone or undefine the policy (which is the default setting).

For detailed information, please refer to the following KB article:

RE: Unable to logon interactively.

RE: Unable to logon interactively.

273720 Error Message: The Local Policy of This System Does Not Allow You to Log

<http://support.microsoft.com/?id=273720>

Hope the information help.

Best regards,

Crina Li (MSFT)

||
| In a SBS 2003 environment three new Windows XP Pro machines have been
| purchased for the network. No changes were made to user accounts on the
| system.

|
| After connecting the new machine to the network and joining the domain
| using the administrator account, the user of the new machine can not
logon

| to the network with the error that the user is not alloed to logon
| interactively.

|
| The user has had no issues for the past two years logging on and no
changes
| were made other than trying to logon to the new computer.

|
| The administrator account can logon to the new computer still.

|
| Any idea why the user is now getting this error message?

|
| Thanks,
| Dave
|
