Hi All,

I am looking for some advice regarding business DSL. I am running SBS 2003 with about 25 users and need to know if the performance of business DSL is adequate for our operation. We currently use a Partial T1 (128kbps) for email and internet, and are looking to increase our bandwidth. We have Sprint business DSL available in our area but I cannot find any information regarding total number of users supported on this service. Any advice would be greatly appreciated.

Thanks,
Mark Madsen
