Thanks for your reply Rick. I saw your comments in an earlier thread but it doesn't really apply. I'm not having trouble \*installing\* it, I'm having trouble \*downloading\* it. When I select the link, either from the Microsoft SBS SP1 page or from the MVP's guide on smallbizserver, I get the same problem – I'm directed to a search page not the download page.

Can someone please click on the link I list and tell me where it takes them?  
Thanks
