- 

Hi all.

The above mentioned server is not Service Packed as yet.

I am having a problem that only happens after a while of the server being used. If I go to create a new user by using the wizard, It wont assign them a mailbox.

I have searched but I am unable to find any information pertinent to my problem. The only issues I can find is that of a "Mail Delivery Policy" of which it isn't. If I restart the server, I can then add as many new users as I wish, but after a day or two, I can't add users as they don't get a mail alias.

I believe its a problem with Sharepoint, but I am unsure on how to fix. Is anyone able to help me?

Thanks

Craig Oakes
