Hey Dwight. You get the "splash screen" if you install from the SP1 CDs, not with the downloads. If you're downloading the updates, you have to download and install all five packages individually.

Take a look at <http://www.smallbizserver.net/Default.aspx?tabid=236> for complete, step-by-step installation instructions for the SP.

HTH...

I was under the understanding that that Windows 2003 SP1 was included in the SBS SP1 and the illustrations on the MS website show that as one of the choices to install. I do not even get the opening screen. Do I need to download Windows 2003 SP1 separately and install that?

You did apply Windows 2003 spl first, yes?

Dwight Mabe wrote:

I get the following error just as the files finish extracting before the setup screen begins:
KB885918 Setup Error.

The log file is:
