I have 2 problems after upgrading our SBS 2003 std to SP1. I followed the instructions at [www.smallbizserver.net](http://www.smallbizserver.net) .

sbsSP1 reported this error :

Component Name: Server Configuration

Version: NA

Installation Status: Failure

Error Message: MSDE 2000 Service Pack 4 did not install. For additional instructions, see the SQL Server 2000 Service Pack Web site at <http://go.microsoft.com/fwlink/?LinkId=46241>.

My second problem is logging into server using RWW "connect to server desktops ."

If I try to : "Log on to or resume the console session of the remote computer" the server reboots after a "bluescreen"

If I log on via RWW to the server without resuming a session , everything is OK.

If I connect via VPN and connects to external server desktop everything is OK.

Anyone can help ?

Thanks

BJ
