Hi Gary,

Thanks for using the SBS newsgroup.

According to your description, I understand that you want to implement a web based media server on SBS domain. If I misunderstood your concerns, please let me know.

Before we go any further, please understand that the stream media protocol would also be involved. I suggest you check which specific protocol that the software is using and publish the stream media ports for the application. So please also contact with the third part software vendor for further assistance.

Generally speaking, we can either host the website on the XP workstation or use SBS to host the web sites.

It your best interest to create a new web site and host the pages on the new site. You can refer to the following document to see how to create a new web site on IIS and publish it via IIS:

816576 HOW TO: Create a New Virtual Server or Web Site in Internet Information
<http://support.microsoft.com/?id=816576>

Please also make sure that you configure the right host header for this website, if you host many websites on IIS, you can refer to the following documents for more detailed information:

324287 HOW TO: Use Host Header Names to Configure Multiple Web Sites in
<http://support.microsoft.com/?id=324287>

After creating the website, if you have ISA installed on your SBS, you can also publish the website through ISA, you can use the web publishing rules in ISA, please refer to the following KB article for more detailed information:

292569 How to set up Internet Security and Acceleration Server to host Web

RE: Web server/Lan setup help

<http://support.microsoft.com/?id=292569>

300435 HOW TO: Securely Publish Multiple Web Sites by Using ISA Server in
<http://support.microsoft.com/?id=300435>

If you do not have ISA installed on SBS, you need to configure the router for website publishing.

1. If you host the website on Windows XP workstation, you need to use DMZ to publish the website.
2. If you host the website on SBS server, you need to open proper port to publish the website.

I appreciate your understanding on this issue. Hope the above information helpful. If you have any further concerns, please let me know. I am here waiting for your updates.

Best regards,

Charles Yang (MSFT)
