Hello,

I'm searching for hours what might be the problem. Untill now no avail...

All my users can access OWA. Now we have some users (managers) who can access almost every mailbox. Locally with Outlook this works fine! But with OWA for some users they get a screen where there is no navigation tree. The get the screen that is normally on the right side of the navigation tree, and there is displayed: "There are no items that can be displayed in this view". Changing the view doesn't change anything.

BUT, when the manager types for example:

<https://example.com/exchange/petra/inbox> the mails are displayed, again without the navigation tree on the left. How can I get this navigation tree back?

Note: when Petra logs in herself, everything is normal.

Any help will be appreciated!

Carl
