Hi all,

We have a 2000SBS with SP4 running. For the last few days we get a DrWatson 4097 error in the App Log:

The application inetinfo.exe generated an application error. The error occurred on...

The exception was c0000005 at 77FCC39E (RtlAllocateHeap).

Right after that we get entries in the Sys Log that the following services have shut down:

IISAdminService

IMAP4

NNTP

POP3

Exchange Routing Engine

SMTP

WWW

We are able to restart all services without a problem. We found KB 311517 that is very similar to our problem but it claims that SP3 fixes the issue. Given that we are running SP4 this didn't help.

Has anybody seen this?

Thanks,
Claus
