Hi Peter

Welcome to 2003...

Personally I would have a totally clean install, no upgrades etc. Howmany users, even if 75 would still do nice and fresh install

Data should be ok to install / copy by putting in HDD in new server or restore from backup.

Exchange, you would need to use a utility called Exmerge, which will export all mailboxes to psts. If use public folders these need to be moved to a mailbox as exmerge doesn't cater for public folders.
