Hi Markus,

Thanks for the logs.

After research into your log file, I found the following resolution for you:

1. Please reboot your SBS server first.
2. Copy %windir%\system32\oleaut32.dll to the %windir%\system32\wbem folder.
3. Run the upgrade again.
4. When the upgrade is done and prompting the user to restart, delete the copied file from the %windir%\system32\wbem folder so it will not interfere with future operations. If unable to delete the file because it is in use by WMI, rename it and then delete it after the reboot.

If you have any questions or concerns, please feel free to let me know.
It's my pleasure to be of assistance.

Best regards,

Jerry Zhao (MSFT)
