I also have like this problem today.

Fax routing was working until yesterday, but today it isn't.

All the fax messages couldn't delivery to the mailbox. just show the error message "Mail system dll is invalid"
How can I solve this? could you let me know if you know another method.

ps. I already did followed the answers of Pat Coleman question (dated on 28~29th June.)
but still not solved.

Thank you in advance.

regards,

Young-Kyung Lee
